## **DETAILED ACTION**

### ***Specification***

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Bosten et al. (Bosten)(US 5,375,495). Bosten teaches a hollow motor housing 136 having an integral handle 52 with a trigger 54 press switch. Bosten teaches the casing has upper and lower handle casings being substantially U-shaped and secured by screws (see figure 5).

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2834

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bosten et al. (Bosten)(US 5,375,495) in further view of Brundage et al. (Brundage)(US 4,934,233). Bosten teaches every aspect of the invention except the cantilever seat is secured by screws to the end of the motor housing, but not specifically by screws. Brundage suggests in figure 9 that the motor housing is secured by to cantilever by screws. It would have been obvious to a person of ordinary skill in the art at the time of the invention to construct the motor of Bosten with the screws shown in Brundage to removably secure the motor to the cantilever because a person of ordinary skill in the art would recognize that the removeable motor allows for cleaning and repair the motor.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dibbern Jr. et al.(US 6272960), Kriaski et al. (US Des 352,509), O'Bannion et al. (US 5,297,463), and Chen (US 5,778,747) show similar circular saws.
